A192 RediBuilt™

Rugged HPEC Computer & GbE Switch

Embedded Computing
without Compromise

Aitech's compact A192 is packed with many of the features most wanted in today's rugged embedded computing environments. Out of the box, the A192's combination of high power processing, Gigabit Ethernet switching, video capture, and removable USB mass storage, in combination with its small form factor and low power consumption, make it ideal for a wide range of applications.

The A192 is based on Aitech's C875 SBC and C680 (Managed) or C681 (Unmanaged) Gigabit Ethernet Switch. Video inputs are provided by the M577 Frame Grabber XMC, and the D300 provides 1 TB of rugged removable SSD storage.

These elements are packaged in an Aitech enclosure along with a high-efficiency power supply, providing a complete High Performance Embedded Computer (HPEC) system in an extremely rugged and compact form factor.
