

# AMC599

Dual ADC @ 6.4 GSPS and  
Dual DAC @ 12 GSPS, UltraScale,  
AMC

AMC599

## Key Features

- Xilinx UltraScale™ XCKU115 FPGA
- Dual ADC @ 6.4 GSPS 12-bits or quad ADC at 3.2 GSPS with TI ADC12DJ3200
- Option for ADC12DJ3200, ADC12DJ2700 or ADC12DJ1600
- Dual DAC (AD9162 or AD9164) @ 12 GSPS, 16-bits
- Two banks of 64-bit wide and a single bank of 32-bit wide DDR-4 for a total of 20 GB
- AMC Ports 4-11 are routed to FPGA per AMC.1, AMC.2 and AMC.4 (protocols such as PCIe, SRIO, 1/10/40GbE, etc. are FPGA programmable)
- AMC FCLKA, TCLKA, TCLKB, TCLKC and TCLKD are routed
- Clock jitter cleaner
- IPMI 2.0 compliant

## Benefits

- Closely coupled ADC and DAC for low-latency response, dual channel for I/Q
- Sampling rate >6 GSPS for radar and EW applications
- Xilinx UltraScale™ XCKU115 FPGA provides powerful compute resource
- 20 GB of DDR-4 memory over multiple banks for high-bandwidth storage
- Electrical, mechanical, software, and system-level expertise in house
- Full system supply from industry leader
- AS9100 and ISO9001 certified company

THE POWER OF VISION

# AMC599

The AMC599 provides dual-channel ADC with sample rates of up to 6.4 GSPS (TI ADC12DJ3200, ADC12DJ2700, or ADC12DJ1600) at 12-bits (or quad inputs at 3.2 GSPS) and a dual DAC (Analog Devices AD9162 or AD9164) update rate of up to 12 GSPS and direct RF synthesis at 6 GSPS at 16-bits making it suitable for signal capture/analysis applications such as COMINT/SIGINT, radar, research and instrumentation.

The unit has an on-board, re-configurable UltraScale™ XCKU115 FPGA which interfaces directly to ADC/DAC. The FPGA has interface to three banks of DDR4 memory channels. This allows for large buffer sizes to be stored during processing as well as for queuing the data to the host.

## Block Diagram

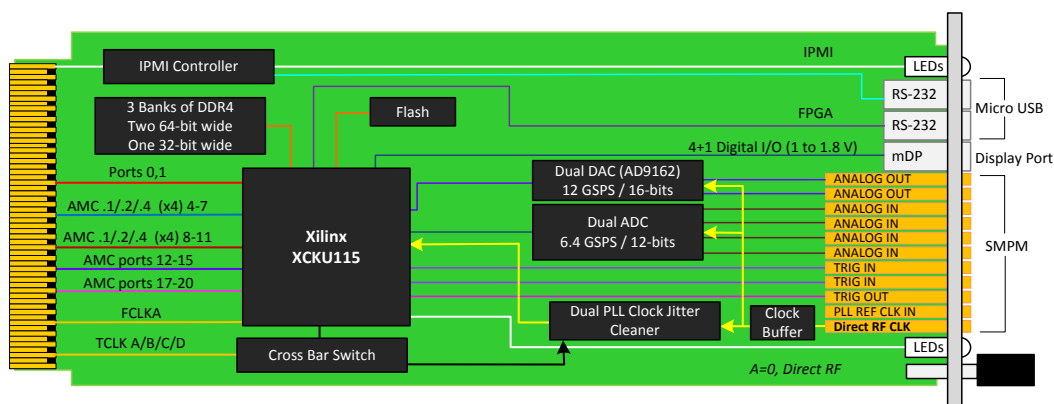

Figure 1: Functional Block Diagram for Option  $A = 0$

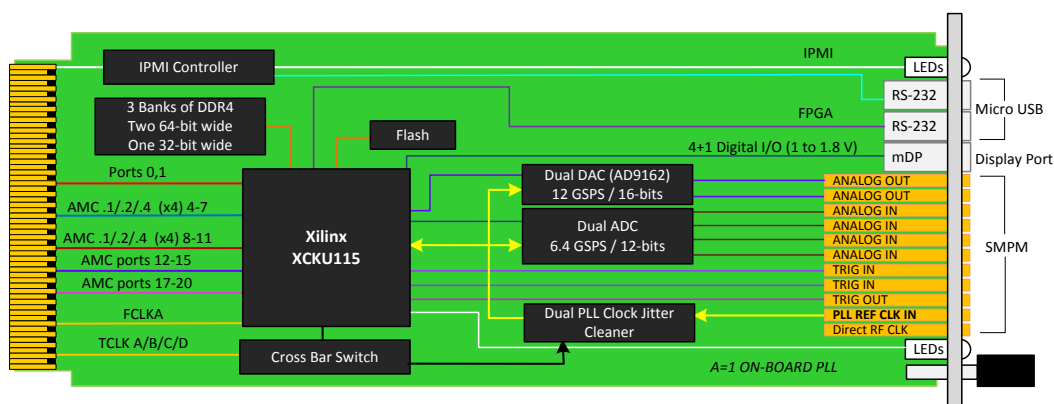

Figure 2: Functional Block Diagram for Option A = 1

Notes:

- Direct RF CLK input is used when selecting ordering option A=0, for up to 8 GHz external clock directly routed to ADCs and DACs
- REF CLK IN is used when selecting ordering option A=1, for up to 500 MHz external clock routed through internal Clock Jitter cleaner, PLL and FPGA to the ADCs and DACs
- Each ADC has two SMPM inputs providing a total of 4 single ended analog inputs, the AMC599 can be used as dual ADCs at 6.4 GSPS or quad ADCs at 3.2 GSPS

## Front Panel

\* Front panel overlay labels are provided for information purpose only, the label text may be different on the actual product.

# Reference Design

VadaTech provides an extensive range of Xilinx based FPGA products. The FPGA products are in two categories; FPGA boards with FMC carriers and FPGA products with high speed ADC and DACs. The FPGA products are designed in various architectures such as AMC modules, PCIe cards and Open VPX.

VadaTech provides a reference design implementation for our FPGAs complete with VHDL source code, documentation and configuration binaries. The reference design focuses on the I/O ring of the FPGA to demonstrate low-level operation of the interconnections between the FPGA and other circuits on the board and/or backplane. It is designed to prove out the hardware for early prototyping, engineering/factory diagnostics and customer acceptance of the hardware, but it does not strive to implement a particular end application. The reference VHDL reduces customer time to develop custom applications, as the code can be easily adapted to meet customer's application requirements.

The reference design allows you to test and validate the following functionality (where supported by the hardware):

- Base and Fabric channels
- Clocks
- Data transfers
- Memory
- User defined LEDs

Xilinx provides Vivado Design Suite for developing applications on Xilinx based FPGAs. VadaTech provides reference VHDL developed using the Vivado Design Suite for testing basic hardware functionality. The reference VHDL is provided royalty free to use and modify on VadaTech products, so can be used within applications at no additional cost. However, customers are restricted from redistributing the reference code and from use of this code for any other purpose (e.g. it should not be used on non-VadaTech hardware).

The reference VHDL is shipped in one or more files based on a number of ordering options. Not all ordering options have an impact on the FPGA and a new FPGA image is created for those options that have direct impact on the FPGA. Use the correct reference image to test your hardware. For more information, refer to the FPGA reference design manual for your device which can be accessed from customer support site along with the reference images.

## SUPPORTED SOFTWARE

Default FPGA image stored in flash memory

- Build Scripts
- Device Driver

Reference application projects for other ordering options

The user may need to develop their own FPGA code or adapt VadaTech reference code to meet their application requirements. The supplied pre-compiled images may make use of hardware evaluation licenses, where necessary, instead of full licenses. This is because VadaTech does not provide licenses for the Vivado tool or Xilinx IP cores, so please contact Xilinx where these are required.

Xilinx also provides System Generator tool for developing Digital Signal Processing (DSP) applications.

# Specifications

Architecture		
Physical	Dimensions	Single module, full-size, (8 HP optional)
		Width: 2.89" (73.5 mm)
		Depth 7.11" (180.6 mm)
Type	AMC FPGA ADC/DAC	Xilinx UltraScale™ XCKU115 FPGA
		Three banks of DDR4:
		Dual ADC / dual DAC
Standards		
AMC	Type	AMC.1, AMC.2, and AMC.4 (FPGA programmable)
Module Management	IPMI	IPMI version 2.0
PCIe	Lanes	Dual x4 via FPGA to AMC
SRIO/XAUI	Lanes	Dual x4 via FPGA to AMC
Ethernet	GbE and 10 GbE	Dual GbE and 10/40 GbE
Configuration		
Power	AMC599	~45 W application dependent (may go up to 60 W)
Environmental	Temperature	Operating temperature: -5° to 45° C (55°C for limited time, performance restrictions may apply), industrial and extended versions also available (See <a href="#">environmental spec sheet</a> )
		Storage Temperature: -40° to +85°C
	Vibration	Operating 9.8 m/s² (1G), 5 to 500Hz on each axis
	Shock	Operating 30G on each axis
	Relative Humidity	5 to 95 per cent, non-condensing
Front Panel	Interface Connectors	11x SMPM
		Micro USBs for MGT RS-232 and FPGA RS-232
		Mini DisplayPort for front panel I/O
	LEDs	IPMI management control
		8 user defined LEDs and 1 Status
	Mechanical	Hot-swap ejector handle
Software Support	Operating System	Agnostic
Conformal Coating		Humiseal 1A33 Polyurethane (Optional)
		Humiseal 1B31 Acrylic (Optional)
Other		
MTBF	MIL Hand book 217-F@ TBD hrs	
Certifications	Designed to meet FCC, CE and UL certifications, where applicable	
Standards	VadaTech is certified to both the ISO9001:2000 and AS9100B:2004 standards	
Warranty	Two (2) years	

## INTEGRATION SERVICES AND APPLICATION-READY PLATFORMS

VadaTech has a full ecosystem of ATCA and  $\mu$ TCA products including chassis platforms, shelf managers, AMC modules, Switch and Payload Boards, Rear Transition Modules (RTM), Power Modules, and more. The company also offers integration services as well as pre-configured Application-Ready Platforms. Please contact VadaTech Sales for more information.

# Choose VadaTech

## We are technology leaders

- First-to-market silicon
- Constant innovation
- Open systems expertise

## We commit to our customers

- Partnerships power innovation
- Collaborative approach
- Mutual success

## We deliver complexity

- Complete signal chain
- System management
- Configurable solutions

## We manufacture in-house

- Agile production
- Accelerated deployment
- AS9100 accredited
